

ENHANCED METADATA VISIBILITY

Know with confidence that your SAS platform is more secure, reduce risk and gain comprehensive metadata visibility, fast.

Metacoda helps you maintain a secure SAS platform in a more efficient way.

With Metacoda Security Plug-ins, you can quickly and thoroughly review, test and troubleshoot SAS metadata security.

For ongoing governance and auditing requirements, Metacoda provides comprehensive visibility of your SAS metadata security implementation, and robust analysis and auditing capabilities.

All this with a few simple clicks.

With Metacoda, you can retrieve and examine the complete identity or object hierarchy in seconds and quickly perform effective permissions analysis across all information assets.

Metacoda is the trusted companion to your SAS platform - eliminating manual, cumbersome tasks and improving the security and governance of your SAS environment.

Reduce Risk

Enhance metadata security governance and user access management.

The Metacoda Security Plug-ins help you:

- continually monitor and test that your SAS environment is secured the way you expect,
- automatically synchronize user identities from Active Directory to SAS,
- view out of the box audit reports for Metacoda-driven identity management changes,
- identify potential access control issues and deviations from best practices in SAS metadata security,
- and so much more.

With Metacoda you can easily implement and maintain metadata security best practices across your SAS environment.

Increase Productivity

Metacoda makes it quick and easy to access security related metadata for analysis, reporting and troubleshooting.

By reducing the number of clicks it takes to get your answer, Metacoda Plug-ins save you time and allow several perspectives of analysis in rapid succession.

Retrieve and examine your SAS environment's complete identity hierarchy and object hierarchy in seconds and quickly generate metadata security reports, without the need to write and maintain custom code.

The Metadata Security Testing Framework from Metacoda allows you to quickly verify your SAS metadata security implementation on a regular basis. It can also be used to examine differences across development, testing and production environments, and SAS versions when it's time to migrate or test your SAS version.

“ Dealing with Metacoda is always excellent and you are easily one of our best vendors when it comes to prompt responses and great support. Thanks to Michelle, Paul and the team for everything you have done and will do in the future! ”
